Professional Summary

Computer Science undergraduate at NIT Jalandhar with project experience in Python, SQL, data cleaning and validation, exploratory analysis, and dashboard development. Skilled in turning raw data into clean, reliable datasets and clear reporting. Seeking a data analyst role focused on data quality, reporting, and visualization.

Education

National Institute of Technology, Jalandhar — Jalandhar, India
B.Tech. in Computer Science and Engineering | CGPA: 8.07/10 — *Aug. 2024 – May 2028*

Technical Skills

Programming & Query Languages: Python, SQL, C++, JavaScript, TypeScript
Data Analysis & Quality: Data Cleaning, Data Validation, Data Quality Checks, Exploratory Data Analysis, Performance Metrics, Anomaly Detection (z-score)
Data Visualization: Matplotlib, Seaborn, HTML/JavaScript dashboards
Databases: PostgreSQL, Supabase, SQLite, Schema Design, Indexing, Query Optimization, pgvector
Analytics & AI: Machine Learning (Regression, Classification), LLMs, Embeddings, Vector Search, Fraud Detection, Risk Decisioning
Tools: Pandas, Jupyter Notebook, Git, GitHub, AWS, Linux/Bash
Additional: Flask, REST APIs, DBMS, Data Structures and Algorithms

Projects

Retail Sales Data Quality & Dashboard | *Python, SQL (SQLite), Pandas, Matplotlib, Seaborn, JavaScript* GitHub
- Built a data-cleaning pipeline on a 12,240-record synthetic retail dataset; audited and resolved duplicates, missing values, invalid prices, and outliers (454 records, 3.7%, removed).
- Wrote SQL queries for monthly revenue, category share, and regional performance; flagged anomalous months using z-score analysis.
- Built an interactive HTML/JavaScript dashboard (category and region filters, KPIs, anomaly-highlighted trend, data-quality summary) with a reproducible, documented repo.

BioShield-UPI | *Python, Flask, DeepFace, PostgreSQL, JWT* GitHub | Demo
- Developed a data-driven authentication and fraud detection system combining keystroke dynamics and facial recognition for UPI transaction risk analysis.
- Evaluated 1,000+ authentication events using 6 features per session, achieving 85%+ recognition accuracy.
- Implemented configurable ALLOW/OTP/BLOCK risk rules; project testing reported a 90% reduction in fraudulent transaction attempts and a 95% reduction in unauthorized access.

AI Job Intelligence Platform | *TypeScript, Next.js, React, PostgreSQL, Supabase, pgvector*
- Built a data-driven platform that processes job descriptions and candidate profiles for semantic matching and relevance-based retrieval.
- Integrated LLMs, embeddings, and vector search for information retrieval, categorization, and AI-powered matching.
- Designed database schemas and optimized SQL-backed retrieval through indexing and query optimization.

Certifications

Machine Learning Specialization – DeepLearning.AI and Stanford University (Coursera)

Achievements

JEE Main 2024: Top 0.9% among approximately 1.2 million candidates; qualified for JEE Advanced.
LeetCode: 550+ problems solved; rating 1560+ (Top 25%).
SOF International Mathematics Olympiad: School-level Gold Medal. Certificate
